## Close Reading Tips:

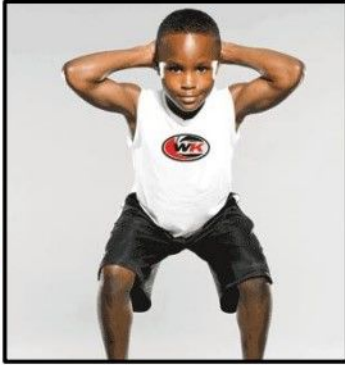

- Put a "!" next to a detail that surprised or interested you.
- Put a "?" next to information you may have found confusing.
- Put a "\*" next to an extra important fact.
- **Circle** unfamiliar words.
- Underline main ideas, such as "who, what, or why" information.
- **Doodle** important thoughts.

# CJ Senter

KID Inventor: The Workout Kid Guides and Videos

- CJ Senter was 10 years old when he began "The Workout Kid," exercise videos for kids!
- CJ's idea for "The Workout Kid" began when he was watching TV and saw an infomercial called P90X. CJ was curious and wondered why they did not have videos like this for kids!
- Hoping to share his passion for fitness with other kids, he asked his dad if he could put together an exercise video for kids.
- He believes his workouts are unique because his exercises are fun! His signature moves are called: Power Jacks, The Shredder, The Fighter, The Invisible Jump Rope, and Flyaways.

# Sarah Buckel

KID Inventor: Magnetic Locker Wallpaper

©GATER Educator

- Sarah Buckel invented magnetic locker wallpaper when she was in 8th grade. She wanted a colorful locker that looked like one you see on Disney Channel shows!
- One day, she watched as one of her friends had to stay after school to scrape off the decorations she'd put on her locker.
- She modeled her idea after her father's magnetic business-card business!
- Today, Sarah has expanded the product line to include mirrors, shelves, message boards, photo frames, locker-sized rugs - and even magnetic, battery power chandeliers!

# Fabian Fernandez-Han

KID Inventor: Oink-a-Saurus Application

- Fabian enjoyed investing, or saving money and buying things that can earn more money over time, after watching his father do it.
- Fabian made an iPhone app called "Oink-a-Saurus" for a contest meant to teach young people how to save and be wise with money, and he won!
- "Oink-a-Saurus" is an iPhone or iPad app that is like an imaginary piggy bank for your phone. It gathers your interests and habits and shows you what it can look like if you save or invest your money, instead of spending it!

# Tyler Dikman

KID Inventor: Cooltronics

- Tyler Dikman was a teen when he founded "Cooltronics," a business that repairs computers.
- At age 10 he got his first computer and was curious to know everything about it! He took it apart so he could study it from the inside-out.
- At age 15, he was offered an internship after babysitting for a tech company's CEO who was very impressed with his computer skills. Soon after, he was put in charge of the entire computer department!
- After much hard work and dedication, "Cooltronics" began selling, delivering and setting up PCs for customers and went on to make millions of dollars each year!
